Dear Indirakumar,

Thank you for volunteering to serve as a Reviewer for the AMIA 2026 Amplify Informatics Conference. We know that time devoted to the profession sometimes comes at the expense of other important things and we really appreciate your contribution to the conference.

Submissions for which you will be responsible have been assigned to you. Please complete your reviews by **11:59 p.m. ET (US) on Tuesday, December 23.**

If you are no longer able to server as a reviewer, please contact meetings@amia.org as soon as possible, so your submissions can be reassigned to another reviewer.

To access the submissions assigned to you, login to the [Reviewer System](#) with the email and password associated with your AMIA account (the ones you used to sign up as a reviewer). This webpage contains helpful information on accessing your account, completing reviews, and reviewer guidelines. If you do not remember your login credentials, please contact the [AMIA Meetings team](#).

Please open the submissions assigned to you as soon as possible, even if you are not going to do the actual reviews until later. If you have a conflict of interest or if you do not feel qualified to review a submission that has been assigned to you, fill out the 'I have a conflict of interest' section on the review form, so your submission can be reassigned. The closer it is to the deadline, the harder it is to reassign your submission to another reviewer, so we really appreciate your help in this step.

AMIA 2026 Amplify Informatics Conference Peer-review Guidelines and Conflict of Interest:

We have created these guidelines to help you understand what is expected of AMIA reviewers. The purpose of a review is:

1. To give the authors feedback about their submission, including, most importantly, a description of ways that the submission could be improved.
2. To provide the Scientific Program Committee/s (SPC) with an opinion regarding the suitability of the submission for the Amplify Informatics Conference. The SPC selects the submissions to be presented at the Amplify Informatics Conference in a competitive process.

You will be asked to provide numerical ratings for the submissions on a scale from 0-5 on criteria such as importance, scholarship, methods, clarity, overall recommendation, and reviewer confidence. In addition, you will be asked to provide 2 sets of comments for each submission you review: (1) Comments for the Authors (**required field**) and (2) Confidential Comments for the SPC (**required field**).

You should also screen the submissions to validate that they comply with the appropriate format. Authors were told, and they had to acknowledge the fact that their submissions may be rejected if they do not follow the prescribed format, especially the page limits. If you are not sure what the format should be, please reference the [Amplify: Informatics Summit Call for Participation](#) or [Amplify: Clinical Informatics Conference Call for Participation](#).

Comments for the Authors (the submitting authors will see them). This is a required field:

- Should average one-half page (200-250 words) but may be longer if there are substantive comments to be made.
- If you are recommending that the work be rejected, please include at least 2-3 substantive sentences about the key flaws and/or ways it could be improved for a future submission.

Other comments to the Authors may include:

1. Comments regarding the suitability of the work for the AMIA audience;
2. Contribution to the field of informatics;

3. Comments regarding whether the context for the work was properly established (i.e., is the literature review adequate, etc.);
4. Comments regarding the suitability of the methods;
5. Comments regarding the appropriateness of the analyses and the importance of the results;
6. Other comments about how the submission could be improved.
7. **Please do not enter your recommendations of acceptance or rejection in the Comments to the Authors field.**

Confidential Comments to the Scientific Program Committee/s. This is a required field:

- These are to be used if there are summary or confidential comments the reviewer wishes to make to the SPC. The submitting authors will not see the Comments to the SPC.
- Assuming substantive comments have been made in the Comments to the Authors section, the Comments to the SPC may be brief. The SPC will see the Comments to the Authors as part of its decision making process.

AMIA Conflict of Interest Statement (COI) for Conference Peer-review:

Reviewers for the American Medical Informatics Association must disclose any conflict of interest that they believe will compromise their ability to give an unbiased review. Conflicts of interest may arise due to financial interest in a product, a professional bias, or a personal relationship (whether positive or negative) with the author(s). By agreeing to review a manuscript, reviewers agree to protect the unpublished document from all forms of exploitation, treat it as confidential material, adopt an impartial and unbiased attitude toward the manuscript, and not communicate directly with the authors about the manuscript. Please indicate a COI by selecting the appropriate box on the review screen when this situation arises.
